EXPERIENCE

CyberLink

Sr. Software Engineer

Taipei, Taiwan

Oct 2023 – Present

Backend Platform — APIs, Distributed Systems & Data Integrity

- Delivered 60+ APIs on a multi-tenant credit platform serving 10M+ daily calls and \$100K+ weekly revenue
- Delivered cross-team integration APIs used by four internal teams: UUID checks, plan and member lookups
- Cut p95 purchase latency ~90% by offloading post-grant work to AWS SQS; shipped with zero defects
- Designed a bundled-consumption API suite enabling multi-step credit reservation with atomic rollback across steps
- Decoupled localization from releases via S3 and an AppConfig (feature flag) sidecar agent, scaling 8 to 25 locales
- Cut database read connections 40% with a 5-minute TTL in-memory cache over high-read static configuration
- Automated credit-balance reconciliation with scheduled Lambda cross-checks and drift alerts
- Built the team's testing practice from zero across three services — Pytest and Alembic in CI, two above 80%
- Added integration and end-to-end tests to an asynchronous purchase refactor, released with zero defects
- Led an MSSQL to PostgreSQL (AWS RDS) migration: code layer, DMS transfer, regression testing, < 5 QA bugs

Cloud Platform, Reliability & Engineering Ownership

- Migrated 3 ECS services from EC2 to Fargate with zero downtime after a written risk, fallback and cost plan
- Sustained 99.99%+ availability across all incident severities while operating 10+ AWS environments
- Cut infra cost 30% and peak CPU from ~90% to ~40% by moving always-on scheduled jobs onto AWS Lambda
- Codified end-to-end service provisioning as Terraform Infrastructure as Code, keeping environments reproducible
- Standardized CI/CD across 4 repos migrated from GitLab to GitHub with reusable GitHub Actions workflows
- Automated stage schema migration by packaging Alembic into a CI-triggered VPC Lambda, now team standard
- Drove OpenTelemetry adoption across 4 services after taking over observability, and wrote the adoption handbook

Nightingale AI

Software Engineer

Tainan, Taiwan

Oct 2021 – Jul 2023

- Built a healthcare service integrating identity-verification APIs and LINE Webhooks, serving 200K+ users
- Built an internal admin dashboard for clinic operations, replacing manual record handling in daily workflows

PROJECTS & AWARDS

- **Hermes** (personal) — self-hosted agent platform on Terraform-managed AWS, running three daily automations
- **Realtime Notes** (personal) — FastAPI/WebSocket collaboration backend, FAISS search, Kubernetes and Helm
- 2nd Prize, TSMC × Microsoft CareerHack 2021 — AIoT electricity anomaly detection

EDUCATION

National Cheng Kung University

M.S. Computer Science (GPA: 4.0/4.3)

Tainan, Taiwan

2021 – 2023

- PAKDD 2024: 2PM-MARL for Online Placement of Mobile EV Charging Stations (multi-agent RL + heuristics)

Fu Jen Catholic University

B.S. Applied Mathematics

Taipei, Taiwan

2016 – 2020

SKILLS

Languages: Python, Java, SQL, JavaScript

Backend & Testing: FastAPI, Flask, Spring Boot, SQLAlchemy/Alembic, Pytest (unit, integration, E2E), JUnit

Cloud: AWS — Lambda, SQS, ECS (EC2/Fargate), RDS, S3, DMS, EventBridge, AppConfig, API Gateway, ALB, IAM

Infrastructure & Security: Terraform, Docker, GitHub Actions, GitLab CI, JFrog Artifactory, SCA in CI, JWT/S2S auth

Data & Observability: PostgreSQL, MySQL, MSSQL, OpenTelemetry, Prometheus, Grafana, ELK/OpenSearch

Certifications: AWS ML Engineer – Associate, AI Practitioner, Cloud Practitioner (DevOps Professional in progress)
